

StorVault Endpoint is a cloud-based data backup and recovery service designed to enable organisations of any size to **backup, store and recover data** created on desktops or laptops, simply and easily.

The challenge

Data created on desktops and laptops is extremely vulnerable to a range of potentially fatal or highly disruptive threats.

The solution

StorVault Endpoint protects against virtually all common data loss scenarios, as well as the challenge of taking control of an explosive growth in data creation by providing all-round endpoint data protection for business data.

StorVault Endpoint:

Usability and accessibility – Installation done in minutes; no additional hardware required

Easy-to-use user interface – Simple to deploy; provides intuitive self-service recovery

Security – Secure anywhere, anytime access to all backup data

Cost-efficient – Pay for what you use; no contracts month to month

Automation & synchronization – Allow files to be backed up to a pre-defined, automated schedule

Convenient – Runs effortlessly, across the internet, from any location (Windows, Mac and Linux support)

Limitless scalability – Value-for-money pay-as-you-grow rates

Recovery – Easily retrieve and recover files, backup data is always online and accessible

Continuous data protection – internet-optimised incremental backups, with compression and de-duplication

Data encryption – secure data encryption at source, in-transit and at rest

About StorVault

StorVault specialises in Cloud Storage, via a world-class data centre located in South Africa. We provide high performance, cost-effective, secure and reliable offsite, Cloud-based backup services through a nationwide network of fully-certified professional business partners and authorised resellers. Our current offerings include flexible Personal, Business and Microsoft 365 data backup and storage solutions.
